

ABSTRACT

This invention relates to a curable liquid resin composition comprising:

- 5       (a) 5-94 parts by weight of a urethane (meth)acrylate comprising a polyether backbone, at least one urethane group and at least one (meth)acrylate end group
- (b) 5-94 parts by weight of a polymerizable monomer, and;
- (c) 0.01-10 parts by weight of a photoinitiator, in 100 parts by weight of the curable
- 10       liquid resin composition,

wherein the cured product of the composition has a glass transition temperature between 30 and 85 °C or less and a stress relaxation time of 30 minutes or less.
